FOR IMMEDIATE RELEASE

Universal Valve Announces Introduction of AST Pre-Piped Remote Fill Box to Product Line

(Elizabeth, NJ) August 31, 2008 – Universal Valve Co. has recently announced the release of its model number 1955, Pre-Piped Remote Fill Box. The remote fill box is designed to contain fuel spillage during above ground storage tank (AST) filling operations. The remote fill box will reduce costly cleanup associated with refueling tanks.

The model 1955 is pre-piped for installation and filling convenience making it easily accessible to the station operator. The 1955 is available in 2" and 3" models. All models of the 1955 are equipped with a pump used to remove spilled fuel from the box itself. The remote fill box also contains a shutoff ball valve and fill adaptor and caps, used to prevent overfills and fuel spillage when fueling which reduces the risk of fire, contamination, and costly clean up.

The pre-piped remote fill box also has a built in lock for added security. The lockable door prevents intruders as well as unwanted debris from entering into the fill box. Universal's pre-piped remote fill box is constructed of stainless steel to help withstand all the elements.
