Universal Valve Announces Release of Island Forms

For Immediate Release

(Elizabeth, NJ) July 2013 – Service station equipment manufacturer, Universal Valve Co., recently announced the release of their carbon and stainless steel island forms.

Universal's island forms are designed to protect expensive important equipment including dispensers, ATM's, and air machines.

Universal Valve's island forms feature special movable braces eliminating field welding during installation. These unique cross braces are easily moved to accommodate many sump sizes and allow for quick and easy installation in the field. Custom sizes are also available upon request.

Island forms come standard in 12 gauge carbon steel, prime coated black, or stainless steel. Combining Universal's island forms with their u-shaped pipe guards and bollards provides maximum protection at the fuel pump. Island forms and pipe guards are a cost effective way to provide property protection to high-priced equipment.
